POTATO FLAKES

Potato flakes are dehydrated, pre-cooked potatoes that have been processed into flat, thin pieces resembling flakes. These flakes are typically made by cooking and mashing potatoes, then drying them on a drum or conveyor belt until all the moisture is removed. Once dried, the potatoes are broken into small, flat flakes. Potato flakes are often used as a convenient and quick way to make mashed potatoes, as they can be rehydrated by adding hot water or milk. They are also used as an ingredient in various recipes, such as soups, stews, and baked goods, to add thickness or a potato flavor. Potato flakes are valued for their long shelf life and ease of storage, making them a popular pantry staple.
